Summary by CodeRabbit

Release Notes

- Introduced new database tables for managing slots and holds.
- Implemented migrations for creating and dropping slots and holds tables.
- Added factories and seeders for slots and holds to facilitate testing.
- Updated configuration files to include new database connections.

Changes

Cohort / File(s)	Summary
Environment Configuration `.env.example`, `.env.testing`, `config/database.php`	Added new environment variables for database connections, including `DB_SLOTS_*` and `DB_HOLDS_*` variables, and updated the default connection settings.
Database Migrations `database/migrations/2024_10_17_000001_create_slots_table.php`, `database/migrations/2024_10_17_000002_create_holds_table.php`	Introduced migrations for creating the `slots` and `holds` tables with specified schemas, including foreign key constraints and indexes. Also added migrations for dropping these tables.
Factories `database/factories/HoldFactory.php`, `database/factories/SlotFactory.php`	Created factories for the `Hold` and `Slot` models to generate test data with random values for testing purposes.
Seeders `database/seeders/HoldSeeder.php`, `database/seeders/SlotSeeder.php`	Implemented seeders for the `Hold` and `Slot` models to populate the database with initial data for testing and development.

Poem

> Slots and holds, a new dawn,
> Migrations run, the data's drawn.
> Factories and seeders, in place,
> Testing with ease, a swift pace.
> Configs updated, the path is clear,
> Development's joy, we draw near.

Walkthrough

This PR introduces new database models for slots and holds, complete with migrations, factories, and seeders. It also updates configuration files to include new database connections for these models.

Changes

Cohort / File(s)	Summary
Environment Configuration `.env.example`, `.env.testing`, `config/database.php`	Added new environment variables for database connections, including `DB_SLOTS_*` and `DB_HOLDS_*` variables, and updated the default connection settings.
Database Migrations `database/migrations/2024_10_17_000001_create_slots_table.php`, `database/migrations/2024_10_17_000002_create_holds_table.php`	Introduced migrations for creating the `slots` and `holds` tables with specified schemas, including foreign key constraints and indexes. Also added migrations for dropping these tables.
Factories `database/factories/HoldFactory.php`, `database/factories/SlotFactory.php`	Created factories for the `Hold` and `Slot` models to generate test data with random values for testing purposes.
Seeders `database/seeders/HoldSeeder.php`, `database/seeders/SlotSeeder.php`	Implemented seeders for the `Hold` and `Slot` models to populate the database with initial data for testing and development.
